## HISTORY

The Western University of Pennsylvania is the oldest institution of learning, with one exception (the University of Nashville), in the United States, west of the Appalachian Mountain range. It came into being as the Pittsburgh Academy in the year 1786, and was formally incorporated by Act of Legislature in February, 1787. It was re-incorporated as the Western University of Pennsylvania in February, 1819. It has educated in whole or in part more than six thousand of the young men of Western Pennsylvania and adjacent States, and its alumni have filled many of the most distinguished offices in the gift of the Commonwealth and the nation.

The growth of the institution has been rapid in more recent years, and the University is to-day the most largely attended institution of learning in its class in the State of Pennsylvania, with the single exception of its sister institution—University of Pennsylvania, located in Philadelphia.

The University has the following departments:

Collegiate and Engineering Department.
Department of Law.
Department of Medicine.
Department of Pharmacy.
Department of Dentistry.

*Professor H. E. Friesell*

The principles and practice of Operative Dentistry are taught by the application of systematic procedures to operations in classes, so that a correct judgment may be formed as to their application in particular operations.

The same method of instruction will be applied by clinical instructors, the classes being divided into sections.

Modern and accepted methods will be exemplified.

#### INSTRUMENTS

Each student, before beginning his work, is required to procure the instruments necessary for his use, a list of which will be furnished. Each Senior student is required to have a dental engine.

All materials used upon patients, including medicines, napkins, rubber dam, etc., furnished by the college.

### OPERATIVE TECHNICS

*Professor Friesell and Dr. Meyer*

FIRST YEAR. 1 Lecture, 3 hrs. Laboratory.

The object of this course is to make the student thoroughly familiar with the organs to be operated upon, together with the principles that underlie all operations upon the teeth, and to provide a systematic course in manual training.

Students will have before them teeth of each denomination, so that right conceptions of form and the relations of the tissues may be studied.

Systematic nomenclature will be taught.

Cutting of sections of each tooth will be practiced.

The surface outlines, markings, and the comparative size and location of the internal cavities of each tooth will be considered.

SECOND YEAR. 1 Lecture, 6 hrs. Laboratory.

*Professor Friesell and Dr. Magill*

This course includes: sectioning of teeth through various surfaces in order to gain a knowledge of the inception and progress of caries; the preparation of cavities of each class in enlarged plaster models; preparing cavities in extracted teeth and celluloid tooth forms, and filling the same with gold; the use of the various forms of gold and other filling materials; opening, enlarging and filling root canals; bleaching, scaling, and as far as possible all operative procedures in detail; instruments and instrumentation.

THIRD YEAR. 2 Lectures 1st Semester, 1 Lecture 2d Semester.

*Professor Friesell*

A review of the technical procedures taught in the preceding years will be followed by a course of lectures and recitations covering the whole field of the principles and practice of Operative Dentistry.

The Operative Clinic is open daily from ten to four o'clock throughout the year, except during the months of July and August, and is in charge of the professor and demonstrators of operative dentistry. The principles learned in the technic course are carried out in the infirmary, and this course is made as much like an actual practice as possible.

employed in modern chemistry. When this preliminary work has been accomplished, the important elementary substances are taken up in order of their natural classification, and separately lectured upon. Contemporaneous with the lectures, every member of the class receives laboratory practice, which includes the preparation (when possible) of each element in the free state, the study of its leading characters and of its characteristic reactions. When the elements have all received consideration in this manner the class is given a brief drill in qualitative analysis, with practice in the identification of inorganic chemical substances in simple mixtures.

### METALLURGY

After the general principles of the subject have been reviewed, the manufacture and properties of amalgams and alloys receive consideration, followed by a study of the individual metals and their uses and application in dentistry, with laboratory practice in identification of metals, and in the manufacture and assay of alloys and amalgams.

### ORGANIC CHEMISTRY AND CHEMISTRY OF ANÆSTHETICS

Lectures, recitations and laboratory practice. The lectures and recitations will be devoted to a consideration of the general principles of the chemistry of the Carbon Compounds, their classification and uses. In the laboratory the student is expected to prepare a series of the more important members, and to study their principal reactions and means of identification.

## 13. MATERIA MEDICA

*Professor Jones*

FIRST YEAR. 1 Lecture.

During the early portion of the Freshman year special attention will be given to the definition of words and phrases, their derivation and signification with reference to their use in Materia Medica, Therapeutics and Pharmacy. After this, the most important drugs

in general use will be taken up and considered separately, with reference to their physiological effects, doses, methods of administration, their toxic effects, antidotes, etc. The same method of teaching is continued through the course.

A review of the first year's work in Materia Medica and Therapeutics, and a further consideration of these subjects as applied to dentistry.

## 14. GENERAL PATHOLOGY AND THERAPEUTICS

*Professor Jones*

SECOND YEAR. 1 Lecture, 1 hr. Laboratory.

A thorough knowledge of General Pathology is necessary before the more advanced branches or special branches can be properly understood. Hence the object of the teaching in this department is to unfold to the student the fundamental principles of the subject, and bring them within his comprehension; also to increase his interest in the study of the subject, to obtain a knowledge of the inception and course of pathological processes, their changes and effects upon the organism as manifested in abnormal conditions.

## 15. ORTHODONTIA

*Professor Flint*

THIRD YEAR. 1 Lecture and Demonstrations.

Normal Occlusion, the etiology and classification of malocclusion, physiology of tooth movement, character of tissues involved, modern methods and appliances for the correction of malposed teeth, and correction as related to the harmony of the facial lines, facial art, are all included in the instruction in this branch.

The technical course consists of free-hand soldering, soldering and adjusting combination appliances, and making of accurate models. The work is illustrated by stereopticon, charts and models, and demonstrated by clinical cases.

## 16. DENTAL CERAMICS

supplemented by demonstrations, in detail, of practical, operative and prosthetic porcelain work.

The more important subjects are: The history and development of the porcelain art; the composition, characteristics and manipulation of porcelain compounds; the source of heat employed; the use and care of furnaces, and descriptions and demonstrations of all the more important methods of inlay, crown and bridge and continuous gum work.

## 17. PHYSIOLOGY AND EMBRYOLOGY

*Professor Rhodes and Dr. Feldstein*

FIRST YEAR. 1 Lecture, 1 Quiz.

The teaching in this branch will consist of lecture, quizzes and practical demonstrations.

In the lectures it will be the aim of the teaching to continually keep in mind the fact that the normal condition must be understood before the abnormal can be known. The student will be taught, as far as possible, to form his conclusions from facts of personal observation, and from those given to him by the demonstrations of the professor.

Each and every structure of the body will be shown, its function and its relation to every other structure. Special attention will be given to the subjects of blood, circulation, digestion and the nervous system, where these are so closely identified with important laws of interest to the dental student.

The lectures will be supplemented by quizzes, and each student will be required to pass an examination in all subjects which have been taught.

SECOND YEAR. 1 Lecture, 1 Quiz.

Muscle and nerve physiology, production of the voice, central nervous system, brain, spinal cord, reproductive organs, embryology and development are considered.

## 18. HISTOLOGY

*Professor F. C. Friesell and Dr. Crawford*

FIRST YEAR. 1 Lecture and Laboratory.

The course in Histology consists of a systematic presentation of the subject of the minute anatomy of the various parts of the body,

partly by lectures, and more especially by the practical study of actual specimens under the microscope. The methods of preparation of microscopical specimens are presented and practiced in the laboratory.

The work in microscopy is preparatory to the subject of histology, and consists of a course of lectures upon the construction and manipulation of the compound microscope, with practice by the student in preparation of temporary and permanent mounts, including the technique of embedding, sectioning and staining, both of hard and soft tissues.

The laboratory is supplied with microscopes and all the apparatus necessary to render the student familiar with the subject of microscopical technique, as well as the normal Histology of the various tissues and organs of the body. Students are required to mount at least twenty-five slides.

SECOND YEAR. 1 Lecture and Laboratory.

Lectures on Dental Histology embrace the origin, development, tissues and the functions of the teeth, and the development of the superior and inferior maxillary bones. The dental tissues; enamel, dentine, cementum, peridental membranes, periosteum, the tooth pulp, the other soft tissues of the mouth, and a short course in embryology of the dental structures.

## PATHOLOGICAL LABORATORY

Laboratory work in pathology and bacteriology is carried on in conjunction with histology. Slides of pathological conditions, including tumors, diseases of the liver, kidneys, lungs, etc., are prepared.

The bacteriological laboratory is equipped with a high-power microscope, containing oil-immersion lens, Abbe condenser and iris-diaphragm. It also contains incubator, dry and moist sterilizers, and every variety of apparatus known to modern bacteriology.

Students are taught rapid staining and mounting of secretions, principles of sterilization, method of isolating bacteria, technique of making plates, study of colonies, staining, mounting and examination of the more common varieties of bacteria, with special reference to bacteria found in the mouth.

## 19. ELECTRICITY—X-RAY

## FALL AND SPRING TERMS

The Infirmary is open from September 1st to July 1st of the following year. During this time patients in abundance are furnished the students for practical work. During the Spring and Fall terms, the Senior and Junior classes have an opportunity to complete their requirements in practical work. During these courses daily clinics are given by the Professors or Demonstrators.

## NOTES

Seats and laboratory privileges are assigned in order of matriculation.

Since distilled water is furnished for drinking purposes, there need be no fear of contracting fevers or other diseases.

The Faculty will be glad to advise parents, when so desired, of the progress and general conduct of students.

According to the regulations of the College no fees are returnable. Should the student discontinue his studies, any fee or fees paid will hold good for a subsequent course, but they are not transferable.

Fees are payable in two instalments; half at the time of entering, and no student is formally entered until this fee is paid, half during the month of January. No student is permitted to enter upon final examinations at the close of the term without a ticket of admittance, which is evidence that all fees are paid, and that he has
